

AlkabupHa

Introducing AlkabupHa®

AlkabupHa is a carefully formulated complementary feed material designed to harness the power of our alkaline technology and be incorporated into the mixed diet to reduce the initial acid load from acidic forages before consumption.

AlkabupHa incorporated into a balanced diet will improve rumen health and function, leading to improved performance and overall animal health.

AlkabupHa can help neutralise and buffer high quality, well fermented grass and maize forage which are often highly challenging with high levels of fermentation acids. This protein - based product also reduces the need for additional protein supplements.

AlkabupHa provides the following advantages:

- Ability to push for higher animal performance whilst addressing possible SARA issues.
- Raises pH of mixed ration before consumption, encouraging increased feed intakes.
- Alkaline pH helps buffer rumen function and improves rumen health and function.
- AlkabupHa improves utilisation of fast fermenting, starch and concentrate feeds.
- Increased rumen function reduces the need for costly bypass nutrients.
- Simple and unique dietary approach to reducing acid load.
- Can be utilised in diets for all ruminants.

TYPICAL ANALYSIS OF ALKABUPHA

	AlkabupHa
Dry Matter %	93
Protein %	90
Oil %	7
PAL	-10,100
Calcium %	2.3
Magnesium %	1.1
