

Alkaforage

Introducing Alkaforage®

Alkaforage is a unique product achieved by combining Alkagrain® and Alkafibre®. Its alkaline properties make it an ideal forage replacer when maize silage / whole crop is unavailable or in short supply. Alkaforage can also be used as a buffer feed in low dry matter, acidic grass silages.

An alkalisated diet will improve rumen health, animal health and performance ultimately driving profitability in any ruminant system.

Alkaforage is approximately 40-50% pelleted material and 50-60% shattered cereal.

Alkaforage provides the following advantages:

- Better rumen stability enables more efficient digestion of feed and reduced nutritional scour.
- Ideal as a replacement for Maize or Whole Crop Silage to add to Grass Silage TMR's.
- Available to 'fill the gap' before Maize Silage or Whole Crop have been harvested.
- Compliments Grass Silage as a buffer feed when dry matters are low.
- Increased dry matter intakes can help increase milk production.
- Helps increase the dry matter in TMR's with wet acidic silage.
- Offers an alternative to arable silages for use in TMR's
- All the benefits of Alkafibre and Alkagrain combined
- Cleaner cows at milking time

TYPICAL ANALYSIS OF ALKAFORAGE

	Alkaforage
Dry Matter %	83
Protein %	14.0
Starch %	30.0
NDF %	35.0
Oil %	3.0
pH	8.5

**All figures are relating to a DM analysis*

TYPICAL FEED RATES OF ALKAFORAGE

	Alkaforage Kg / head / day
Dairy Cows	2 - 6
Beef Cows	2 - 6

**Alkaforage is extremely farm dependent, please seek nutritional advice.*
